OUR PRODUCTS ARE THE FUTURE OF ARCHITECTURE

BUSINESS PROFILE

KMB Steel Product® is a producer and supplier of stainless and acid-resistant steel products. Our offer includes, above all, point drainage defined as drainage grates or floor drains as well as linear drains and manholes - inspection flaps and panel searches.

KMB BRAND

The name KMB itself is the acronym of the first letters of the surname and first names of the company's founder, which emphasizes indefinite guarantee of good name and reputation of the quality of products by the Owner and a guarantee of the services provided. **In 2019 - i.e. the year of our Jubilee of activity, we patented our trademark to seal our many years of activity and so that we are the only ones under Polish law to use the name KMB Steel Product.**

HISTORY OF COMPANY

The company KMB Steel Product® was founded on July 1, 2009 in Cracow by Maciej Bartłomiej Kaczor - an engineer who many years ago was passionate about materials science and stainless steel itself.

Therefore, following in the footsteps of their ancestors - their father and grandfather, who also dealt with stainless steel and ores - Maciej Kaczor started his business activity related to metal processing and stainless steel production 10 years ago and thus became a continuator of skills, work and development workshop of their relatives and protoplasts.

The history of KMB Steel Product® allows you to remind about the family heritage passed over the years, and even mentioning it with reference to it makes us one of the most reliable brands in the stainless steel industry.

”

Our products are
the future of architecture,
and we make every effort,
that tomorrow will be the best.
Thank you for years of trust
and invite you to further cooperation.

Maciej Kaczor
CEO

MISSION

In accordance with the principle of *INDIVIDUAL SOLUTIONS OF STAINLESS STEEL*, the individual approach is to be the same for customers - flexible and professional, so that our contractors receive high-quality products always in accordance with the agreed delivery dates.

ADVANTAGES OF KMB PRODUCTS

Our products are distinguished above all by good quality at a reasonable price. The constant development of technology and quality improvement, production with the benefit of the environment, fast delivery and good price of goods - all this makes our products very popular.

OUR VALUES

The basic values that we consistently follow are:

- tradition, knowledge and practical experience
- innovation, development of production technology
- individual approach to client
- honesty and professionalism

The above values are our inseparable brand promise, which is the core of the company's identity built for years.

SPECIAL SOLUTIONS

We also do, among others stainless tanks, cylindrical sieves, hospital platforms, stainless steel basins and many other stainless solutions.

We invite you to visit our company official website www.kmb-steelproduct.eu available in several language versions.

PRODUCTS

HISTORY OF COMPANY

Company Timeline

OUR GROWTH OVER THE YEARS

**The 80s and 90s
XX century**

The Kaczor family, mainly in the male line, in the difficult times of the PRL, deals with stainless steel, its processing, turning, production of tanks, stainless vessels, as well as the ores themselves. All this shapes and reveals the future interests of Maciej Kaczor - the founder of KMB Steel Product.

**July 1
2009**

Maciej Bartłomiej Kaczor - as an engineer who had been passionate about materials science and stainless steel for many years before, followed in the footsteps of his ancestors - his grandfather and father - he founded a company in Cracow KMB Steel Product.

2014

KMB Steel Product after several years of activity, it has an established position in the sanitary industry. With hard work and development of the marketing concept, KMB Steel Product tries to intensify its sales

2016

Maciej Kaczor studying the company's results and remembering on family principles, also in business, changes the course of its activities - first of all, it moves away from unethical partners who blocked the company's development and relies on reliable, trusted people and associates.

2018

The change of course turns out to be a bull's eye - sales and production technology are developing dynamically. And the willingness to develop further is accompanied by the desire to restore full ownership of the brand for oneself and the family.

2019

In the year of the company's jubilee, KMB STEEL PRODUCT ® is already a registered brand in accordance with the doctrine: **ONE BRAND - ONE PROMISE - ONE COMPANY**

2020

There is an announcement of an innovative stainless steel solution - **SNAKE solution** and other novelties in the offer - a new series of aluminum manholes, aluminum slotted channels and an interesting alternative - plastic inlets with stainless grates. In addition to new products - we are constantly developing the technology of stainless products to best support the sanitary industry with hygienic products in the difficult fight against the global COVID-19 pandemic.

Future

We still have enthusiasm for work, technology development and cooperation with contractors. Stainless products are simply the domain KMB STEEL PRODUCT®. Thank you for your trust and we invite you to further cooperation

FUTURE DRAINAGE

of stainless and acid-resistant steel

In the face of the thrilling events of 2020 concerning a declared **global pandemic Covid-19 disease**, caused by the SARS-CoV-2 virus - KMB Steel Product ® as a company in the sanitary industry - it tries even harder to improve its technology to support so important nowadays demand for products of the highest standard hygienic.

Also in times when we live in the face of the progressive climate change in the world is extremely important supporting our natural environment.

KMB Steel Product ® drainage systems contribute to the wise management of waters surface, especially regulation the condition of the waters, their flow and effective drainage buildings and construction investments.

The future of drainage is the continuous development of technology, greater hygiene requirements and proposing better and better solutions in the age of such great challenges that we have faced.

OUR PRODUCTS ARE THE FUTURE OF ARCHITECTURE

WHAT IS THE SPECIFICITY KMB PRODUCTS?

KMB natural drainFLOW

Looking for harmony in the flow of surface waters in industry, construction and natural economy - We have assigned the appropriate instincts and animal attributes to our standard products made of the highest quality AISI 304 and AISI 316 stainless steel, so that our customers can easily choose the appropriate KMB product model.

These attributes will even more vividly and clearly emphasize the specificity of our products, their good and strengths and thus allow for the perfect selection of our solutions to the current needs of construction investments. KMB STEEL PRODUCT® drainage and inspection elements perfectly fulfill their function due to the wide range of solutions we offer.

Check our offer and see for yourself.

HIGH QUALITY PRODUCTS - - HQ KMB DRAIN

Our offer includes the highest quality products made of stainless and acid-resistant steel AISI 304 and AISI 316, including linear and point drainage, as well as washbasins and products for the food and construction industry.

We have the **Hygienic Certificate of the National Institute of Hygiene** and **National Declaration of Properties**.

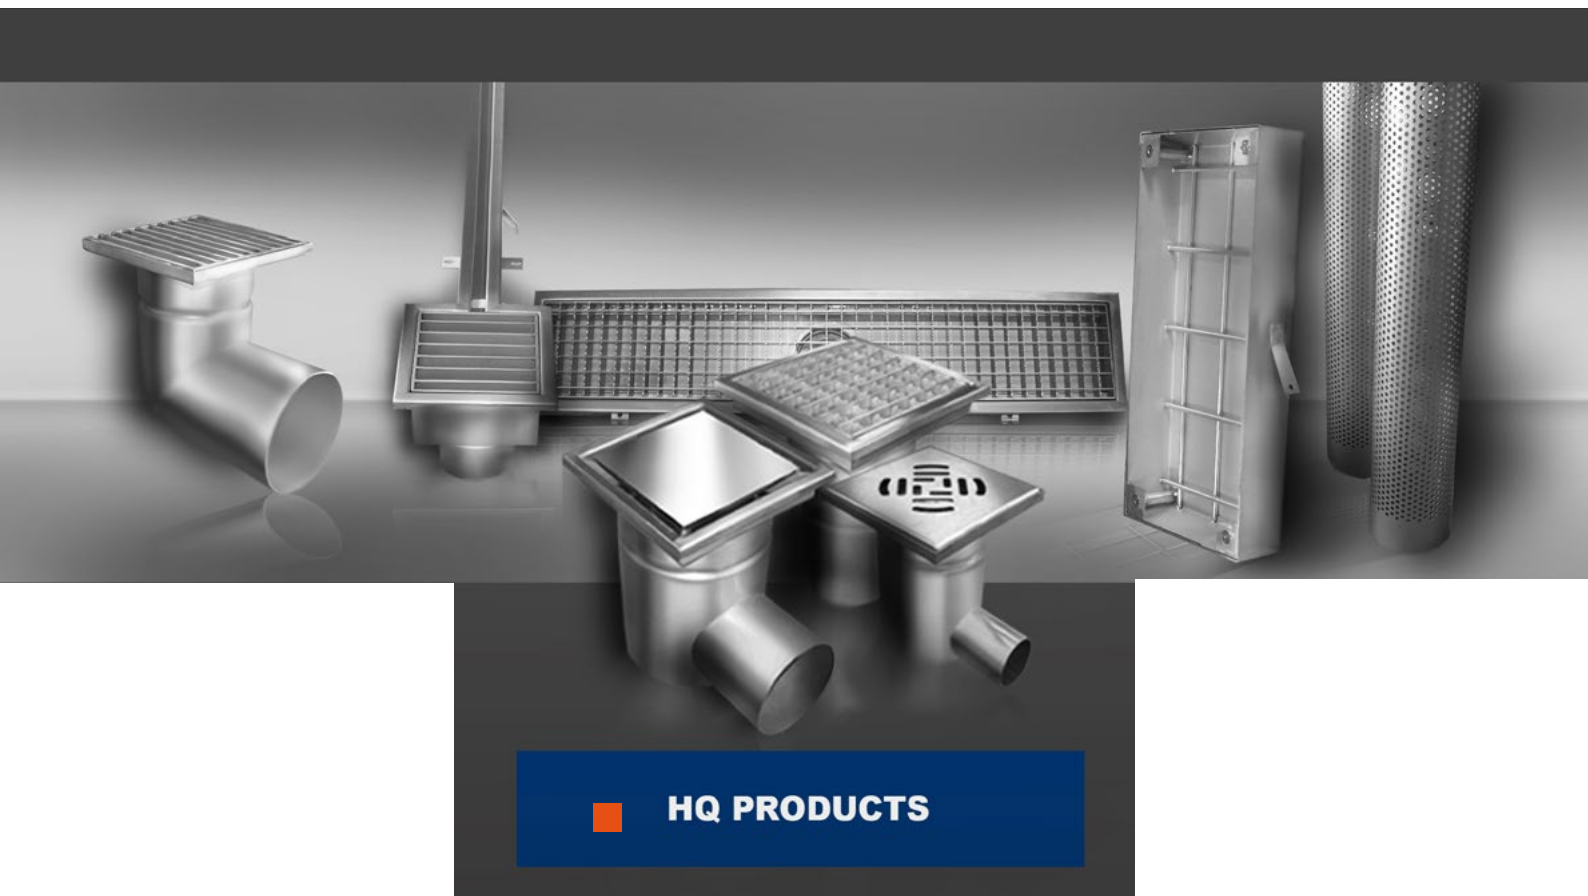

HYGIENIC CERTIFICATE PZH

The company KMB STEEL PRODUCT® has the **Hygienic Certificate of PZH**, which is a certificate that the product KMB STEEL PRODUCT® presented for evaluation, when used in accordance with our recommendations, does not adversely affect health and the environment.

NATIONAL DECLARATION OF PROPERTIES

The company KMB STEEL PRODUCT® has a National WU Declaration, confirming that our products meet the requirements of the standard **PN-EN 1253-1:2015** and are approved for use throughout the European Union.

HQ PRODUCTS

IN OUR OFFER:

1. Floor Drains

Floor drains are used to drain water from industrial surfaces to the sewage system or constitute an outflow of the gutter or slot channel.

2. Linear Drains

Linear drains - channels are equipped with rectification screws and anchoring elements. They allow you to properly level the drainage and embed it in concrete.

3. Manhole Covers & Rodding eyes

We use manholes and revisions wherever access to underfloor installations is required, e.g. in halls, galleries, restaurants or warehouses.

4. Others

In our offer customized products are also available. These include platforms, balustrades, cylindrical screens, furniture and stainless sinks.

LOAD CLASSES

NORM: PN-EN 1253

PN-EN 1253 assumes 7 target groups to which appropriate load classes are assigned:

**H1,5 Class:** areas where loads are not expected, e.g. roof surfaces**K3 Class:** Traffic-free areas such as commercial premises and public areas such as toilets, changing rooms, showers**L15 Class:** Areas with little traffic, such as commercial and public premises, excluding forklift trucks**R50 Class:** Traffic areas, such as commercial premises and factories**M125 Class:** Traffic areas such as car parks, factories and workshops**N250 Class:** Industrial areas with a possible high load class subject to the movement of forklift trucks, such as food processing areas, chemical or processing plants**P400 Class:** In an environment with possible very heavy ground loading, including food processing areas, chemical or processing plants where gullies are subjected to industrial forklifts and / or maneuvering heavy vehicles

The drainage load class depends on:

1. additional reinforcements of the drainage edges (as in the case of stainless steel gutter channels)
2. correctly performed assembly
3. use of the appropriate class of concrete.

The drainage load class depends on:

4. the type of cover grating used and its dimensions, e.g. height
5. the material from which the drainage is made and the cover grate
6. the width of the linear drainage

>>> IMPORTANT INFO

The above load classes are assumed for static, not dynamic loads. When selecting the cover grating, pay attention not only to the maximum load, e.g. the weight of the forklift and the weight of the pallet. You should also pay attention to the frequency of travel and the size of the working wheels.

In case of doubt, it is recommended to choose a higher load class from the diagram above or contact KMB STEEL PRODUCT® technical department to agree on the best solution.

The icons shown are only suggested and do not constitute a standard for a given grate model.

KMB STEEL PRODUCT® offers gratings in the K3, L15 and R50 class.

DRAIN

KMB FLOOR DRAIN

GENERAL INFORMATION

Floor drains find application in public use buildings, kitchens, bathrooms, basements, washhouses, in all places where it is necessary to use high standard, stainless steel hygienic solutions.

TECHNOLOGY

All of KMB's floor drains are made of stainless or acid-proof steel (AISI 304 or AISI 316), they ensure durability and functionality in use, as well as meet sanitary requirements so essential for maintaining the desired hygiene.

TYPES OF FLOOR DRAINS

division according to the amount of discharged water

Professional

optimal floor drains >>>

The leader among floor drains > high capacity + maximum drainage

Intelligent

hybrid solution >>>

compromise connection MINI and PRO floor drains

Clever

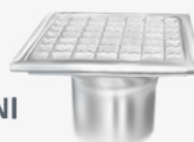

economic floor drains >>> smaller size + good price

PRO

SMART

MINI

ADVANTAGES of the KMB STEEL PRODUCT® floor drains

- they are very easy to assemble
- they have removable parts, such as a siphon and a strainer / sludge basket, and thus give full control over the entire installation
- they have several models of cover grates depending on the needs and preferences of the customer

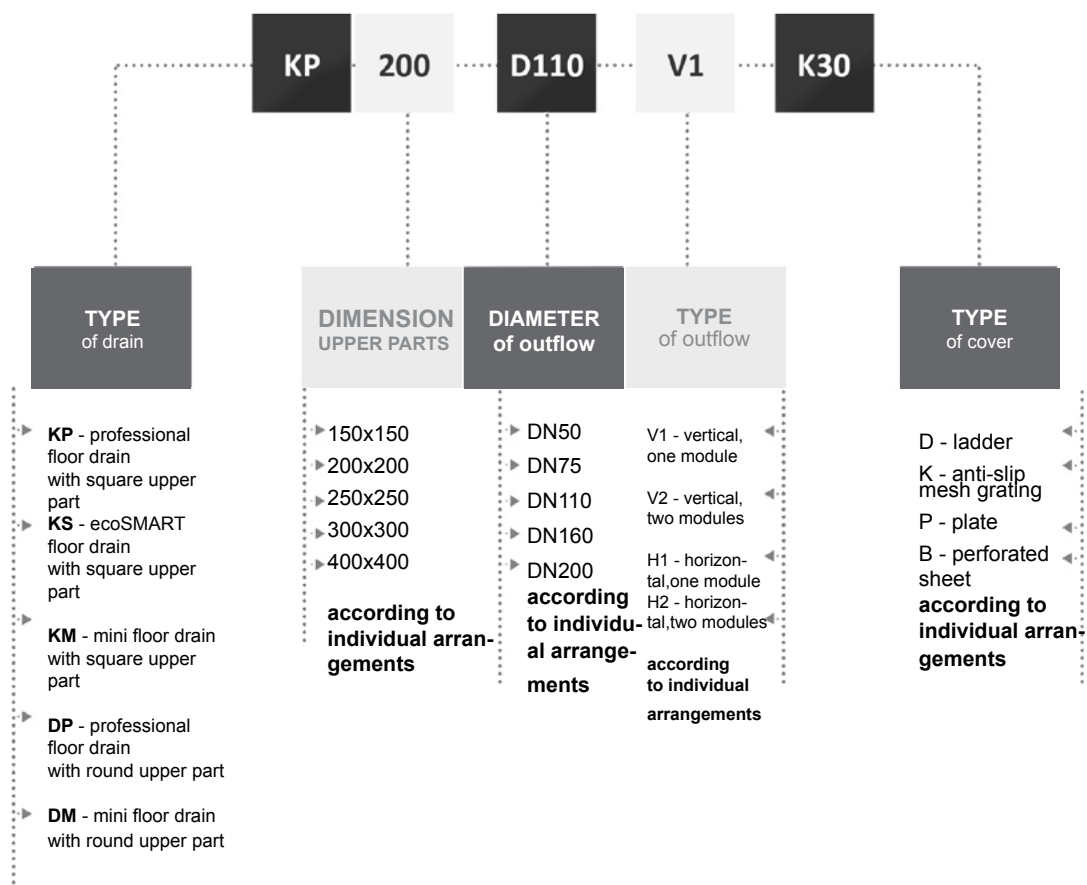

SELECTION The choice of the type of gully depends mainly on the following parameters:

- The amount of liquid that needs to be drained in a time unit (choice of the diameter of the outflow, size of the upper part)
- The number of flowing solid parts (selection of the sorting basket)
- Pressure force - a type of load that will act to the drain's cover
(Depending on the type of grate, the groove will be able to carry various loads - from pedestrian traffic for heavy traffic)

FLOOR DRAINS

HOW TO READ CATALOGUE SYMBOLS ?

EXAMPLE

KP200-D110-V1-K30 - professional floor drain, with square upper part 200x200 [mm], with diameter of outflow 110[mm], vertical, one module, with anti-slip mesh grating.

KMB FLOOR DRAINS:

> high throughput and low fluid waste
> featured by a large siphon and variable diameters drain

> it combines a good capacity of liquid with good price
> reasonable hybrid solution though the use of snap cart

> it has the capacity to allow for smaller discharges of liquid and solid waste
> in a great price for a smaller size, and by using the strainer basket instead of snap

HOW TO MAKE THE APPROPRIATE SELECTION OF THE FLOOR DRAIN?

1. Determine the required capacity, ie determine the water discharges per unit of time. (small -MINI, medium-SMART or large-PRO)
2. Determine whether there will be waste - solids - e.g. feathers, pieces of processed food, etc. at the inlet installation site.
3. Then determine whether we need a horizontal or vertical drain to connect to the sewage system and whether we need a one-piece or 2-module drain.
4. Simply - contact our KMB Steel Product® technical department - tel. +48 511-098-312 or by e-mail: biuro@kmb-steelproduct.eu, we always offer you help and our advice.

FLOOR DRAINS

HOW TO INSTALL THEM?

Floor Drain -1-MODULE

ONE MODULE FLOOR DRAINS - ASSEMBLY / INSTALLATION

1. Make sure the drain pipe is at the correct height.
2. During concrete pouring, the upper part should be 1,0-1,5 [mm] below the floor level.
3. Later floor layers can be made when the upper part is stabilized.
4. During concrete pouring make sure, that the upper part clearance is not narrowed.
5. Concrete have to gets to all places, even difficult of access ones.

TWO MODULES FLOOR DRAINS - ASSEMBLY / INSTALLATION

1. First, put the lower part of the floor drain in the structural part of the floor. The lower part should be placed in the hollow of 15-20 [mm] to ensure adequate draining of the condensate from the damp-proof course.
2. Make the damp-proof course and secure it with the clamping ring of the lower part.
3. Later, position the upper part on the required level. The upper part edge should be placed about 1,0-1,5 [mm] below the floor level.
4. Next floor layers can be made when the upper part is stabilized.
5. During concrete pouring make sure that the upper part clearance is not narrowed.
6. Concrete have to gets to all places, even difficult of access ones.

Floor Drain -2-MODULES

Economical drains - smaller size + good price

Floor drains

MINIdrain

MORE THAN GOOD PRODUCTS.

Standard diameters of the drains: Ø50, Ø75, Ø110

Upper part dimensions: 150×150, 200×200, 250×250, 300×300

Material: AISI 304 or 316 stainless steel

Cover grate height: 20mm-40mm for KM200, 10mm for KM150

Waste catcher: strainer

Load classes: K3 – L15 – M125 – N250 – P400 – the class depends on the type of the selected grate and its height; The load class is also influenced by the additional reinforcement of the edges of the floor drain and its correct installation. The K3 class applies only to pedestrian traffic, while the L15 class allows for low-traffic passages (e.g. pallet trucks, smoking trolleys, etc.)

■ ANTI-ODOR COVERS

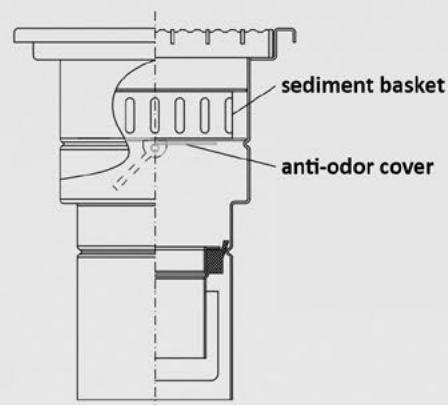

ANTI-ODOR COVERS

ANTI-ODOR

ANTI-ODOR covers
stainless steel product
with gasket

List of available anti-odor covers for floor drains with specified parameters

Gully top (PRO and SMART floor drain)		200x200	250x250	300x300	400x400
Outlet diameter [mm]	50	✓	✓	✓	✓
	75	✓	✓	✓	✓
	110	✓	✓	✓	✓
	160	✗	✗	✗	✗
	200	✗	✗	✗	✗

SPECIFICATION

All anti-odor covers are made from **stainless steel V2A (AISI 304)** with rubber gasket.

Anti-odor covers are additional barrier before sewage gases enter the room, they close the mechanical odor in a mechanical way.

Especially used in places with low frequency of water or sewage, where a wet siphon would require additional service.

Anti-odor covers are produced for professional and semi-professional floor drains in both - horizontal and vertical versions - one and two part. Available drainage diameters: **DN50, DN75, DN110** with anti-odor inserts.

KMB LINEAR DRAIN

GENERAL INFORMATION

The gutter drains are made of stainless or acid-resistant steel and are used to discharge water or sewage from the floor surface to the sewage system.

This type of drainage is used in all types of food, construction and catering industries, as well as in hospitals and public utility buildings.

The slot drains are used to discharge water or sewage from the floor surface to the sewage system. They are used wherever high hydraulic capacity is not required, e.g. when cutting dry and wet zones. This type of drainage is used in all types of food, construction and catering industries, as well as in hospitals and public utility buildings.

TECHNOLOGY

the linear drains made of stainless steel AISI 304 or acid-resistant AISI 316. Dehydration is made with a drop in the bottom, standard 1%. They can also be made with another drop or without. The drains are equipped with holders for leveling feet and anchoring parts. Optional - equipped with an edge filling with a stainless profile.

CHANNEL TYPES

EXAMPLE:

S200-1000-2xKP-D110-V1-K30 is a gutter drainage 200 mm wide, 1000 mm long, with two vertical one-piece outlets and a 30 mm high anti-slip grating.

Depending on the width of the drainage and the selection of the appropriate type of drain, as well as its diameter, linear drains may have additional extensions at the receiving points.

On the next page there is a table with the basic dimensions of the extensions and the minimum width of the drainage for each inlet.

HOW TO INSTALL THEM?

INSTALLATION OF DRAINAGE WITH 1-MODULE OUTFLOW

1. Before installing the channel, it must be protected against soiling. Take off the cover, sediment basket/strainer and siphon/trap,
2. Then, turn all the parts of linear drain, abt get a tight seal between them. - combination: flange - gasket - flange
3. Next step is the install to the sewage system,
4. After that, we set and level well (the edge should be 1,0-1,5 mm under the surface of floor),
5. Don't forget about protect against displacement before concreting,
6. Use struts - to avoid narrowing of linear drain,
7. A flexible joint should be used.

INSTALLATION OF DRAINAGE WITH 2-MODULES OUTFLOW

1. Before installing the channel, it must be protected against soiling. Take off the cover, sediment basket/strainer and siphon/trap,
2. Then, bottom module of flow we stick to the ceiling - 10-15 mm and in the hollow within 10 cm from the edge of the flange,
3. Next step is the ceiling insulation - press the flange against the collar,
4. After that, turn all the parts of linear drain, abt get a tight seal between them. - combination: flange - gasket - flange,
5. We set and level well (the edge should be 1,0-1,5 mm under the surface of floor),
6. Use a wedge gasket,
7. Don't forget about protect against displacement before concreting,
8. Use struts - to avoid narrowing of linear drain,
9. A flexible joint should be used.

Economical solution - narrow SLOT instead of grate + good price

LINEARdrain

CHANNELS

SCHEME OF LINEAR DRAINS

LINEAR
DRAINS

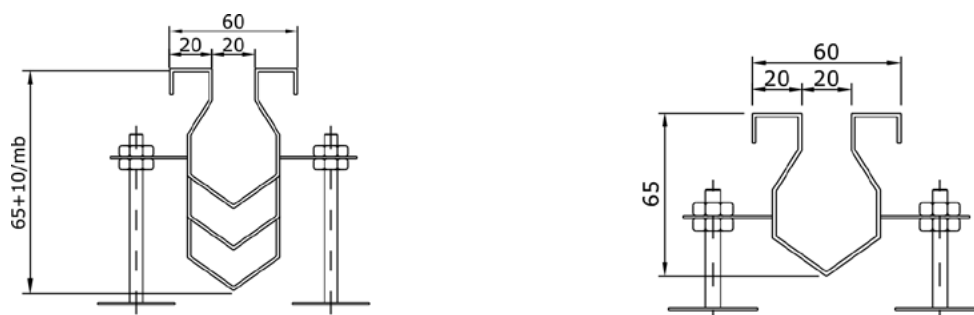

The depth of drainage increases as the bottom falls. It is also possible to make drainages without a fall. The standard starting depth is 65mm and the slope is 0.5-1.0%. At the customer's request, drainage systems with a different slope or a lower initial height can be produced.

CHANNELS

TYPES OF FILLING EDGES

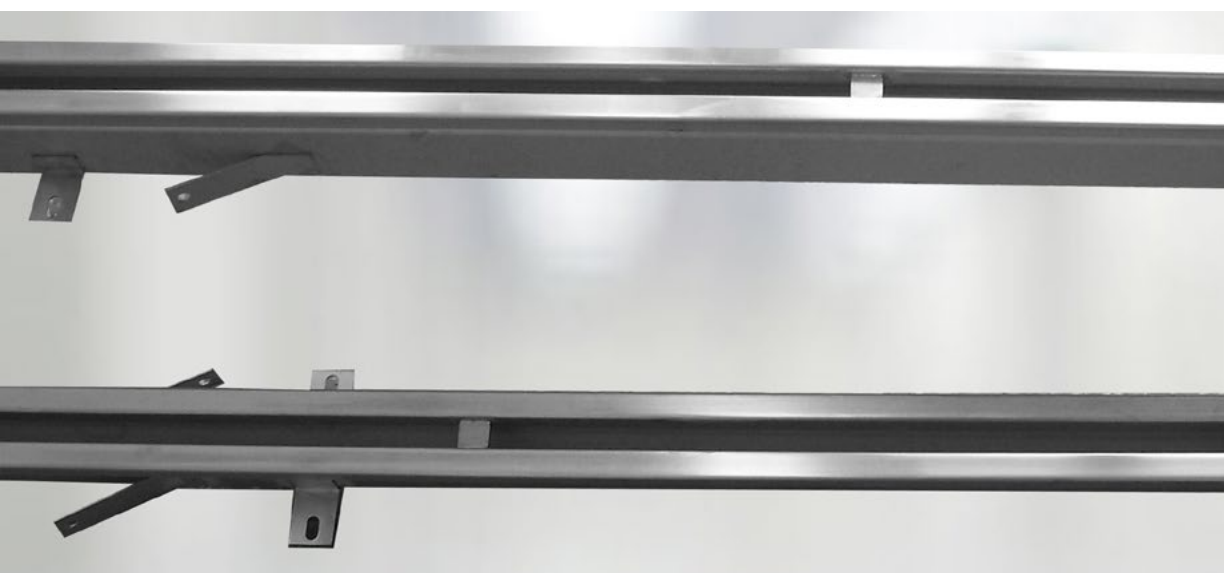

DRAIN SECTIONS WITH DIMENSIONS

KMB STEEL PRODUCT® CHANNELS ADVANTAGES

- they are cheaper solutions compared to gutter drains
- fit well as an architectural element
- no cover grate - lower purchase costs
- they can be combined with other types of drainage

MANHOLE COVERS & RODDING EYES

GENERAL INFORMATIONS

PRO floor revisions, also called hatches or cleaners, are used wherever access to underfloor installations is required, e.g. halls, galleries, restaurants or warehouses. The elements finishing the surface of the hatch can be floor tiles, terracotta and others.

TECHNOLOGY

All KMB STEEL PRODUCT revisions are made of stainless steel (AISI 304 or AISI 316), thanks to which they ensure durability and functionality in use, as well as meet sanitary requirements. We also offer aluminum manhole covers.

Rodding eyes

Floor revisions for filling are the perfect solution for those who appreciate functionality with ease of use and a nice design.

The interior of the cover can be filled with the same type of „floor” that we use around the panel revision, i.e. one that we adapt to our needs. The inspection is additionally equipped with a gasket that protects against the leakage of unpleasant odors from the sewage system and is secured with 4 screws.

KMB STEEL PRODUCT® provides complete rodding eyes along with the necessary accessories. Any custom orders please consult our Technical Department.

ASSEMBLY

The following conditions must be respected during the installation MANHOLE COVERS:

1. The upper part and the lower part of the cleaner must be folded during installation.
2. Remember to put spacers between the edges of the top part and bottom to avoid distorting the frame.
3. The hatch should be leveled and placed on the previously made manhole.
4. It is recommended to fill the manhole with concrete of C25 / 30 class or higher, depending on its dimensions and the size of the target filling.
5. Concrete should be of such a height that it is possible to install the floor later.

Special solutions
RODDING EYES DRAINS

SPECIAL SOLUTIONS

KMB RODDING EYES DRAINS

GENERAL INFORMATIONS

Special solutions are tight transitions used for gluing waterproof insulation or for fixing insulation, as well as floor inspection drains enabling access to the underfloor sewage system.

TECHNOLOGY

All KMB STEEL PRODUCT® watertight passages and inspection gullies are made of stainless or acid-resistant steel (AISI 304 or AISI 316), thanks to which they ensure durability and functionality in use, as well as meet sanitary requirements, so important for maintaining the desired hygiene.

**RAIN-TIGHTS
DRAINS**

**RODDING
EYES DRAINS**

KMB STEEL PRODUCT® ADVANTAGES OF SPECIAL SOLUTIONS

- they are very easy to assemble
- the round shape of the body reduces the deposition of dirt
- are watertight

CHOICE OF SPECIAL SOLUTIONS

The choice is mainly determined by the following factors:

the need for better sealing of the ceiling sewage system

the need to regularly preview the installation

full supervision of the sewage system necessary
